THE RULE OF THIRDS

living on the lake

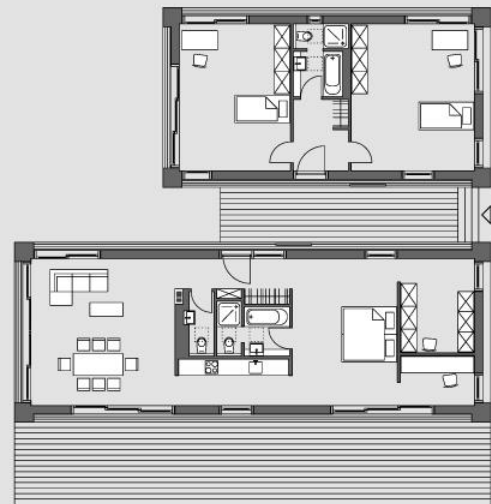

The shown example stühaus 167 is the second smallest sized module, but probably the most popular. It is the ideal size for a single, a couple. The introduced house is three wallpanels long and one in width. If this isn't enough it can be extended with another stühaus for the kids. The stühaus 167's axial layout and strong focus toward the large window in the living space allows a beautiful view over the lake.

perspective

stühaus XI.2005

The 'Synapse House' operates on three conditions: *containment*, *territory* and *simultaneity*.

01

It is possible that compact spaces are more than just optimal planning scenarios. Potentially, compact spaces could be the ignored set of evidence that could stabilize what some would call a current 'phenomenon of excess'.

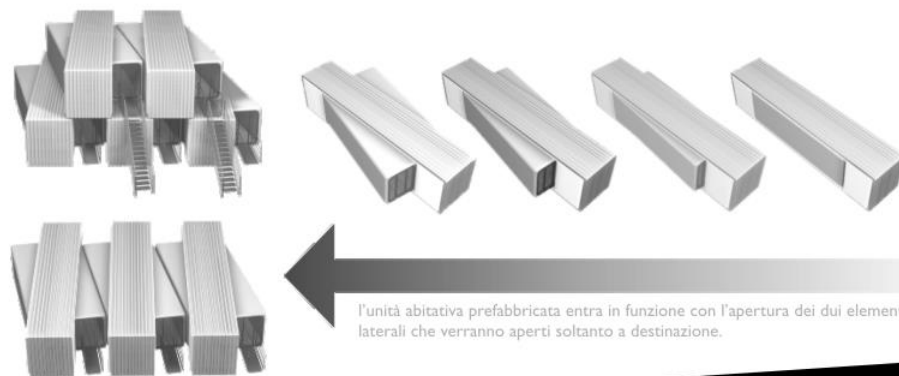

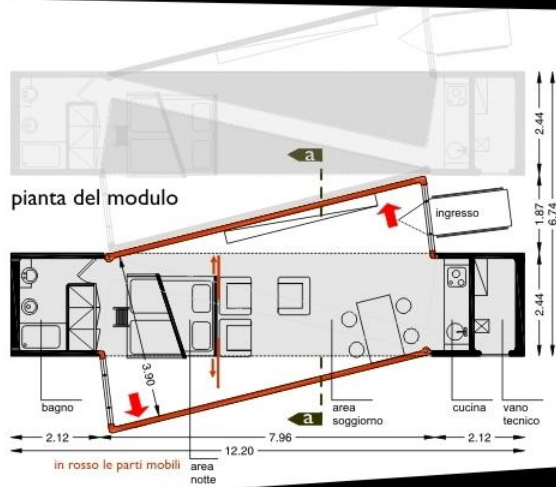

Compact spaces can actually arouse both security and comfort. Prefabricated housing suggests compact living and seemingly uncomfortable. The investigations leading to 'Synapse House' imply that limitations can actually frame possibility, and simultaneously offer scale and scope of necessities.
