## Miami's Vision for 21st-Century Parks and Public Spaces

### NEW AND RENEWED PARKS

**Goal: Acquire land so that there is a park within a quarter mile of every resident.**

People are most likely to use the parks that are close to where they live, regardless of park size. In acquiring new park land, the City should work toward making it possible for every resident to walk safely and comfortably to a park. The long-term goal should be no more than a ten-minute walk from every home to a park—about one-quarter of a mile.

**Goal: Make the most of what we have; preserve and enhance existing park land.**

Miami's existing park land is a precious legacy from the past that belongs to all the citizens of the city. All of Miami's parks should be safe, well-maintained, attractive, and programmed to fulfill their potential within the city's network of public spaces.

### MORE WAYS TO EXPERIENCE WATER

**Goal: Enhance and ensure public access to water.**

Miami's genesis and identity are inextricably linked to its tropical waterfront location. Everyone wants more and better access of all kinds to Biscayne Bay, to the Miami River and the Little River, to canals and lagoons, to the Picnic Islands, and to the cooling effects of water parks, spray play areas, and swimming pools.

### MORE NATURE IN THE CITY

**Goal: Promote environmental sustainability and education in parks and public spaces.**

Miami's development has obscured its connections to the natural environment. More trees and plantings in parks, on streets, in public plazas, and in "lost spaces" like highway embankments should be accompanied by more support for conservation areas and environmental education, as well as sustainable management practices.

### GREEN STREETS TO LINK PEOPLE TO PARKS

**Goal: Create green connections across the city and into the region.**

Greenways and a network of tree-shaded streets safely linking parks and public spaces to one another and to other city and regional destinations invite people to walk and bike, making Miami a healthier and more pleasant city to live in.

### MORE PLACES TO PLAY

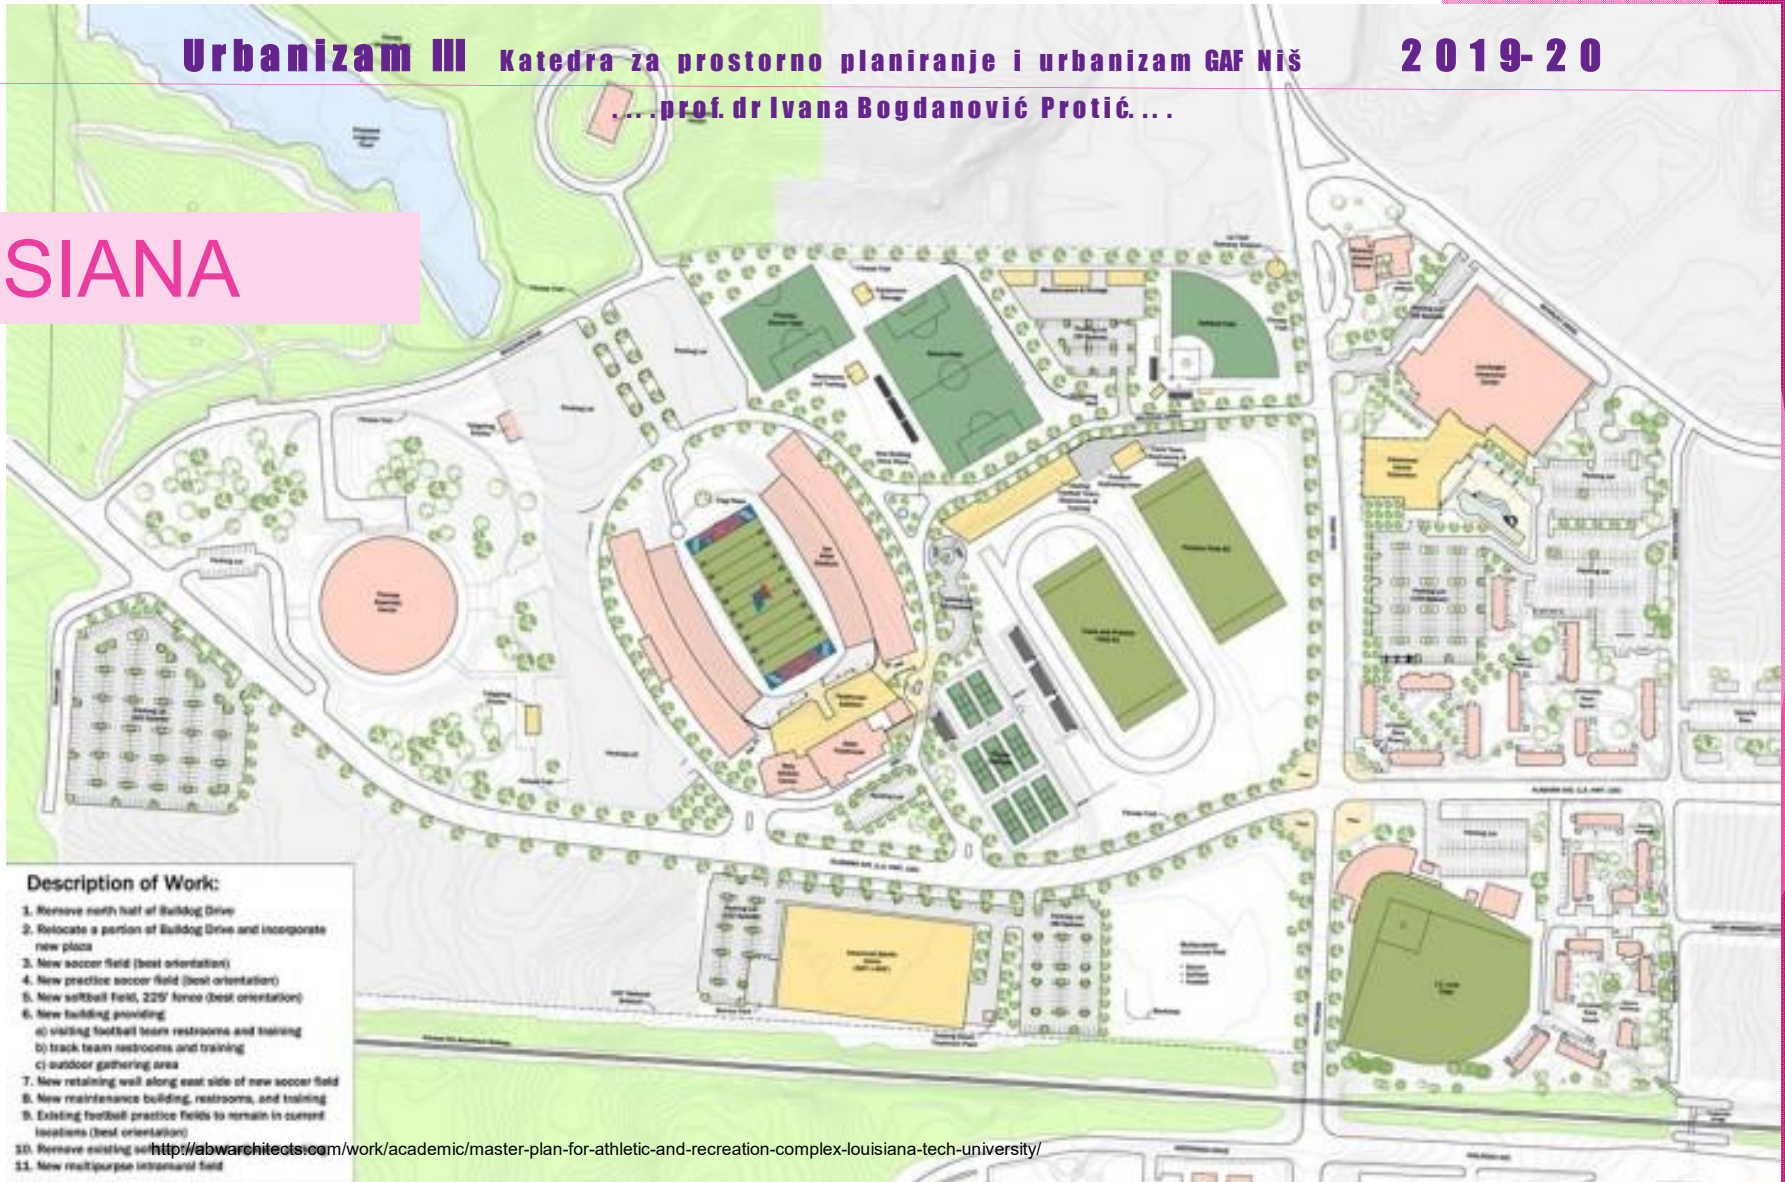

**Goal: Refocus on priorities for recreation.**

Recreation needs and desires change as the population changes and as new activities come into prominence. The City should continue strong youth programs while focusing on key priorities to serve residents of all ages and abilities, enhancing partnerships for additional recreation opportunities.
